

# UTM/ATM Integration Solution

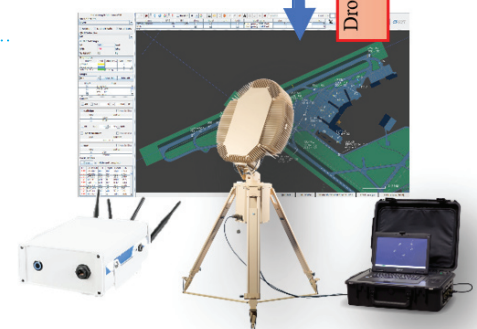

UTM Solution is built on ATM processes and principles and provides smooth system and operation adaptation, both on technical and personal side. This approach is bringing fast and easy understanding of UTM to pure ATM word and allows clear view on ATM - UTM system cooperation.

The solution is designed to enable holistic management of events from detection through Air Defense Systems and CRAM (Counter-Rockets Artillery and Mortars).

## MAIN FEATURES

- Smooth and comprehensible system and person adaptation
- Cuts integration costs
- Boots integration process
- Provides service interoperability
- Ingests events from RF, radar and other detection systems
- Orchestrates notification, mitigation and response actions
- Fosters digital transformation through automation and risk mitigation
- Ready for multi-sensor detection: Radio Detection, Radar Detection, Acoustic and Visual Detection

The solution is ready for

**AIRMAP** UTM Manager

**ALS** ATC System

**ReGUARD** 3D-radar

**Dedrone** A-UAV
